

**ACTIW SYSTEMS**

**- YOUR INTRALOGISTICS. AUTOMATED**

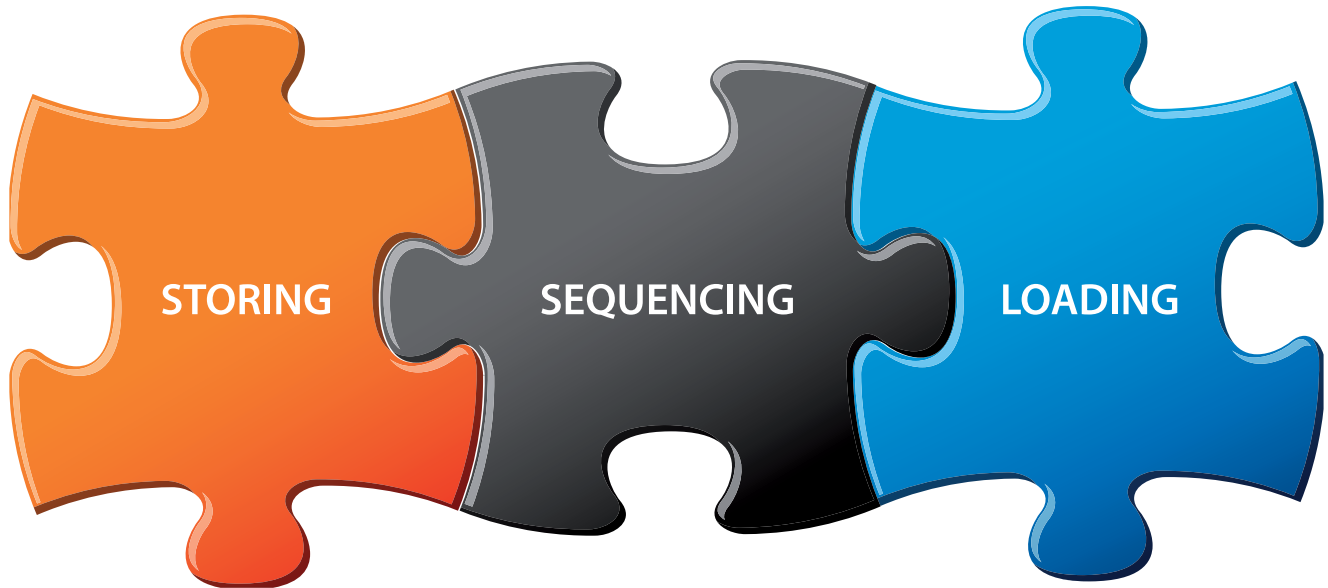

Actiw Systems bring the performance, safety and reliability of automation into environments where it has not been considered viable before.

*6 people loading 40 containers per hour. Is it possible? Yes, it is possible with Actiw Systems.*

# END-TO-END CONCEPT FOR YOUR INTRALOGISTICS NEEDS

Actiw Systems' unique technology challenges the status-quo in automated pallet handling. We can navigate and automate awkward spaces that no other can. We offer unprecedented performance in density

and flow. Actiw Systems make automated loading as simple as it should be. All of this is seamlessly integrated or in components, fully compatible with any other system you may have.

**Actiw solution comprises three different functionalities that can be introduced separately or as a fully integrated end-to-end solution.**

Storing: Actiw Storage  
Load preparation: Actiw Sequencer  
Loading: Actiw LoadMatic

*Actiw Systems' features fit exceptionally well with the high performance needs of FMCG and petrochemical industries.*

# ACTIW STORAGE - HIGH DENSITY DYNAMIC STORAGE

Actiw HD/DS (High Density and Dynamic Storage) system works like a large 3D sliding puzzle with dense storage at every point in its height, width and depth. In the most typical setting, the system is used for handling pallets, but it can easily be applied to other loads as well, e.g. paper rolls or steel products.

- Automated warehouse with ultra-high density and highest-in-the-market throughput
- Perfect choice for low (<20 m) installations, multistory buildings and irregular floor space and building height
- High system redundancy
- Inherent sequencing and staging capabilities
- Inbound and outbound interfaces in the entire periphery; multilevel, all sides, above and underneath
- Lightweight structures enabling installation on existing, conventional floor space

# ACTIW SEQUENCER - AUTOMATED LOAD SORTATION

Actiw Sequencer offers simple, safe, accurate and efficient loading of the trucks. Essentially, the Actiw Sequencer's sole purpose is to handle a variety of incoming material streams and organize the loads within the system. It then supplies loading docks, even at floor level for low-lift pallet truck operation, or feeds an automated loading system, with the right goods always at the right time and in the right sequence. All performed with incredible speed.

- Fully automated sequencing of truck loads
- Ultra-high density and throughput, speeding truck loading times and minimizing space required at the loading docks
- Compatibility with any outbound material flows from a multitude of sources
- Releases pressure on other parts of the intralogistics chain, improving overall efficiency and handling capacity of the entire site

**ACTIW** LOADMATIC®

# ACTIW LOADMATIC - AUTOMATED TRAILER AND CONTAINER LOADING

Actiw LoadMatic makes loading as easy as it should be. When a full truck load is ready, the LoadMatic simply loads the cargo into the truck or container in one push. No alterations to the cargo space or substructures beneath the cargo are required. The LoadMatic is seamlessly integrated into any production, warehouse or sequencing system.

- Fully automated truck loading, seamlessly integrated with any complementary systems
- One shot loading, reducing docking time to a matter of minutes
- Less manual work and equipment needed
- Gentle loading, both for cargo and cargo space
- No alterations needed to trailers or containers
- No special equipment required at the receiving end

# INDISPUTABLE BENEFITS AND COST SAVINGS WITH ACTIW SYSTEMS

 ACTIW LOAD

A number of companies have already chosen Actiw Systems and gained real monetary effects through making the decision. Actiw Systems' features fit exceptionally well with the high performance needs of FMCG and petrochemical industries. Read more about our industry references from [actiw.com](http://actiw.com).
