

Actiw LoadPlate

– ideal for containerisation of timber products

Actiw LoadPlate was developed to meet customer demands for quicker and safer container loading. During the years LoadPlate has proven its efficiency in loading standard cargo space. It is highly suitable for loading various timber products such as sawn timber, planed and glue laminated timber products, panels, construction elements from frame pillars to timber frames.

An investment with a short payback time.

■ Excellent space utilisation

- standard cargo space without any modifications
- no substructures under the cargo

■ Damage free loading

- gentle load handling
- easy cargo lashing and securing

■ Short turnaround times of vehicles

- easy loadforming in open space
- fast one push loading cycle
- easy unloading by LoadStrips

■ Cost of ownership

- minimised labour and machinery costs
- low operation and maintenance costs

■ DCs vs. OTs

- remarkable freight price difference
- better availability of DCs

Safety

Safe working environment is an issue that is hard to overestimate. In the decision making concerning LoadPlate investments it has played a big role.
